

Car Power Box for head

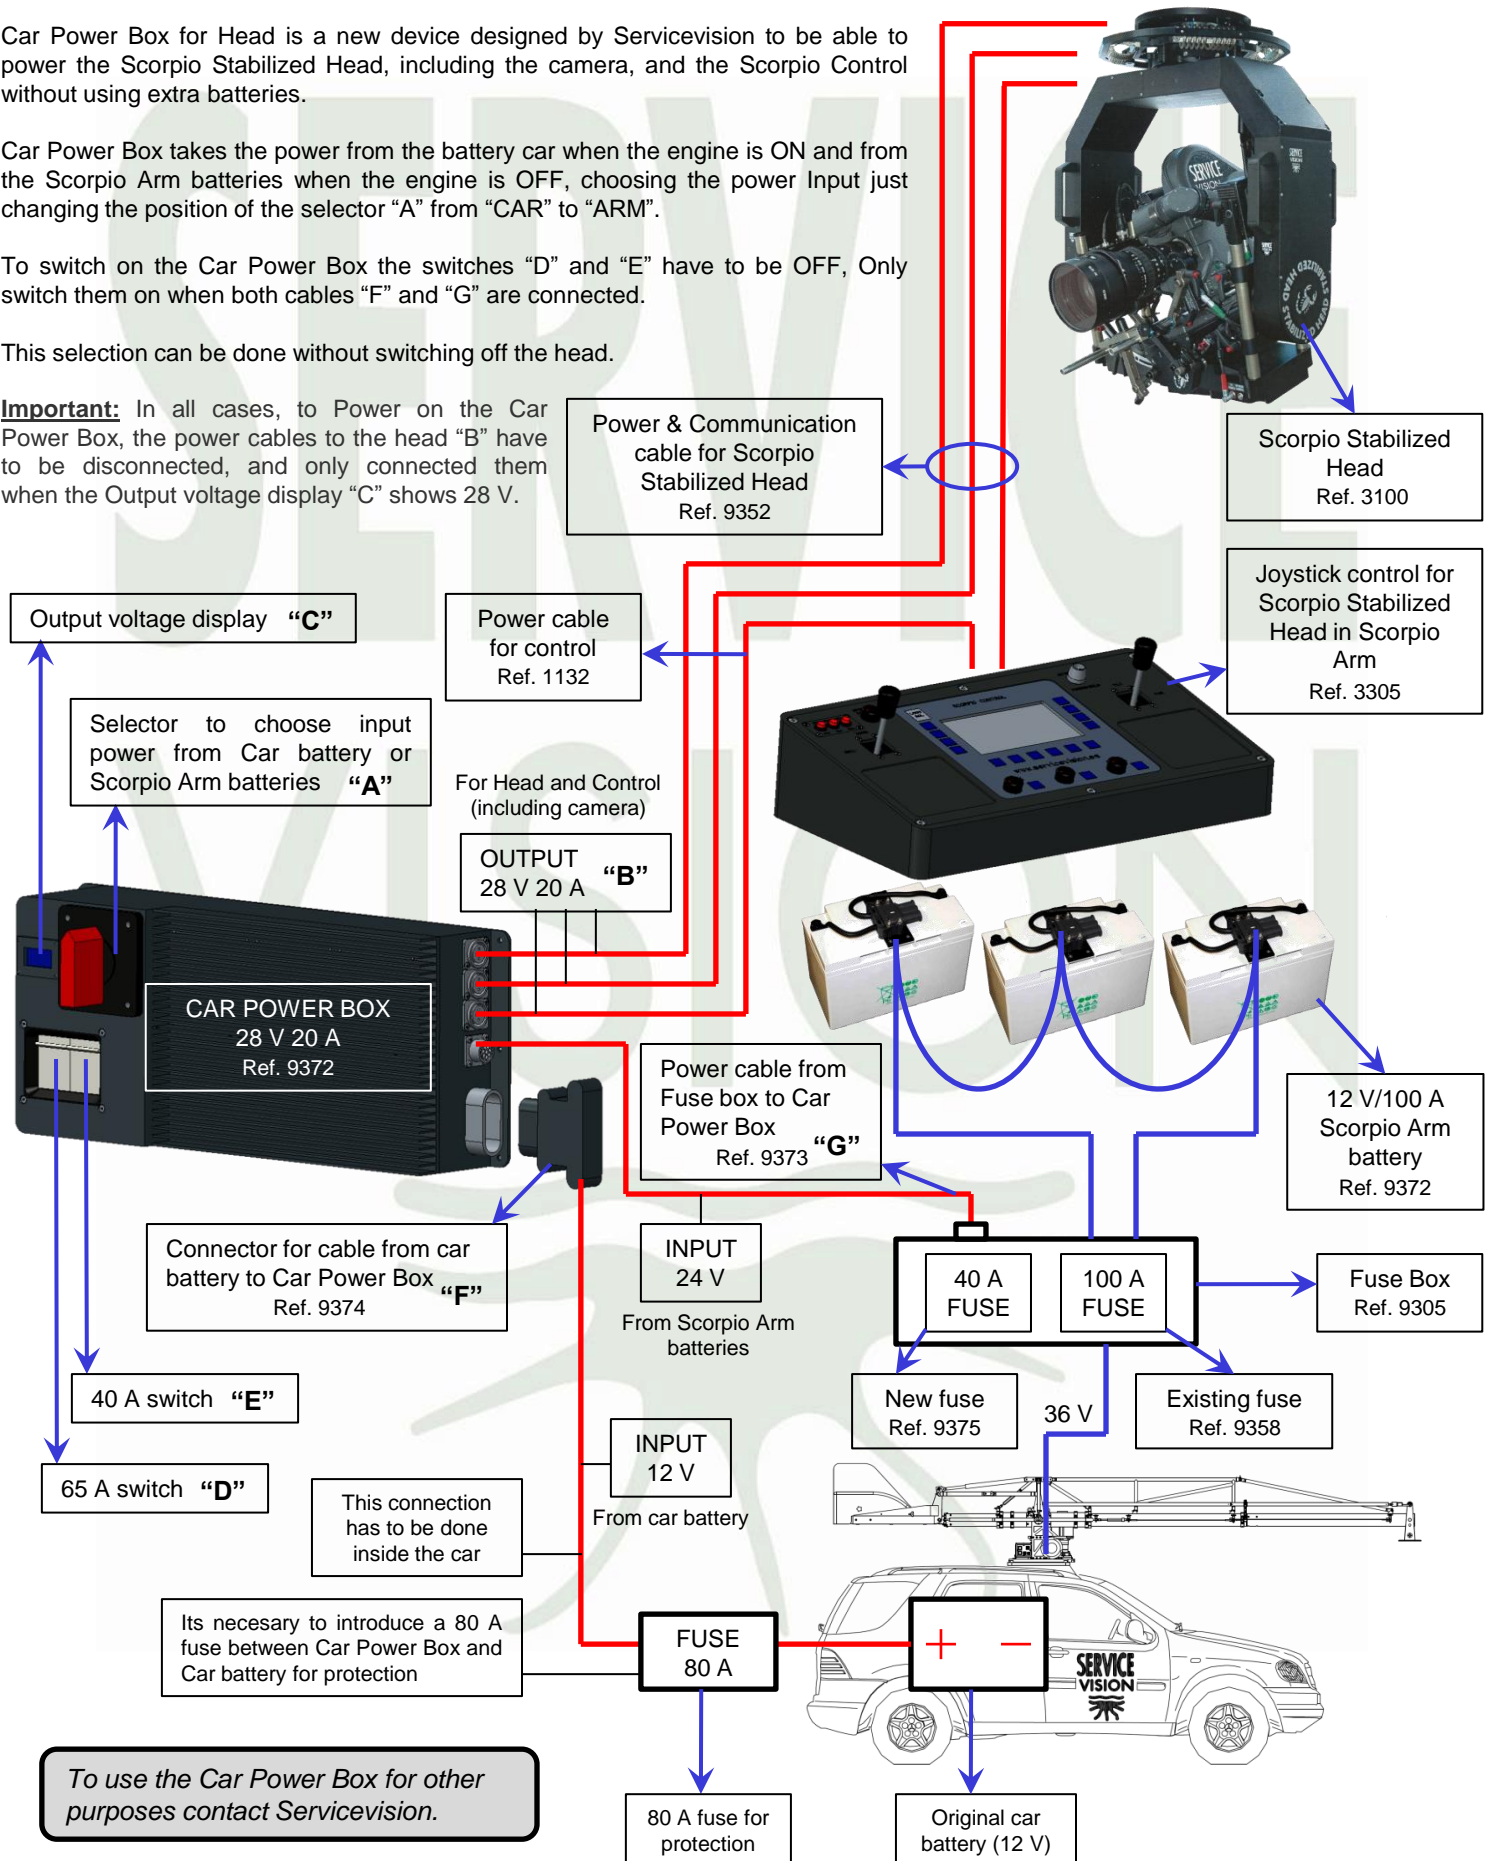

Car Power Box for Head is a new device designed by Servicevision to be able to power the Scorpio Stabilized Head, including the camera, and the Scorpio Control without using extra batteries.

Car Power Box takes the power from the battery car when the engine is ON and from the Scorpio Arm batteries when the engine is OFF, choosing the power Input just changing the position of the selector "A" from "CAR" to "ARM".

To switch on the Car Power Box the switches "D" and "E" have to be OFF, Only switch them on when both cables "F" and "G" are connected.

This selection can be done without switching off the head.

Important: In all cases, to Power on the Car Power Box, the power cables to the head "B" have to be disconnected, and only connected them when the Output voltage display "C" shows 28 V.

To use the Car Power Box for other purposes contact Servicevision.
